

WEATHERPROOF

WEATHERPROOF EXTENSION

FEATURES

- You can place the generator outside without having to build a room for it!
- Prevents water getting into the generator via the ventilation louvers.

ABOUT

The Bundu Power weatherproof extension fits all generators from the BP10S unit upwards. It is a large louvered duct placed on top of the generating set to allow the air to be expelled through the top vent while preventing rain from entering through the top vent into the generator.

An extension is a necessity for all generators which will be exposed to the elements that do not have a roof over them.

The weatherproof extension allows for the generator to be installed in any location, inside or out.

EXHAUST EXTENSION

FEATURES

- Install the generator indoors and expel the gases outside.
- Safety first! Ensure that the exhaust gases are carried away from buildings and structures.

ABOUT

- **TYPE 1 (SMALL UNITS)**

The exhaust extension consists of a flexible 90° bend connected to an exhaust that extends 2 meters. It is supplied with an additional 90° bend (not flexible), 3 clamps and a rain cap. The exhaust is supplied as is, alterations for specific applications are at the purchasers discretion.

- **TYPE 2 (LARGE UNITS)**

The larger exhaust extension is a straight up exhaust with one clamp and a rain cap. No bends are included and the alteration of these exhausts is not recommended. Alteration of the exhaust is done at the clients own risk.
