

SMS ALERT & CONTROL

FEATURES

- Instant Notification by SMS
- Remotely Start / Stop the Generator
- Identify problems
- Up to 9 different Notifications

ABOUT

The SMS Alert and Control system can be integrated into any diesel generator in the Bundu Power range.

The SMS unit is mounted inside the generator housing (space permitting) and runs off the generator's battery. When the generator is in automatic mode it will start-up when the power fails and will send a SMS to a predetermined cell phone number. If the generator has a problem when running it will send a SMS to you notifying you of the problem that it has encountered. When the generator shuts down, the user is also notified, allowing them to confirm that the generator has successfully shutdown.

Take away the hassle and expense of having to rely on other people to monitor your generator and have the generator notify you directly!

SIM MANAGEMENT

FEATURES

- No Contracts
- Always have airtime
- Avoid Prepaid SIMs becoming inactive
- Limit Risk of stolen SIM cards

ABOUT

SIM management is a service which ensures that your GSM Alert is always operational and has sufficient airtime to send SMS's through to your phone.

The GSM control system is all about hassle free monitoring of your equipment, so why should you have the hassle of taking out another contract or monitoring the balance of a prepaid SIM. SIM Management does all of this for you.

SIM Management cuts out the risk of having a SIM card stolen and the bill run sky high before you know it!

By opting for the SIM Management service you will get 1 year of hassle free GSM Alert communications and avoid the hassle of supplying your own SIM card.
