

## REMOTE START

### REMOTE START

#### FEATURES

- Start and Stop your generator from up to 30m away.
- You don't need to go outside in the dark to turn the generator on.
- Easy to use remote.

#### ABOUT

Bundu Power offers a remote start button in conjunction with the manual change over switch, which allows you to automatically start and stop the generator. A battery charger will keep the battery topped up at all times to ensure that the generator starts as soon as you press the start button.

The remote start button is easy to operate. One button to start the generator, another to stop it. In conjunction with a Manual Change Over Switch this system gives you the flexibility to automate most of the process while still having control of when the generator will start and stop.

### MANUAL (MCS)

#### FEATURES

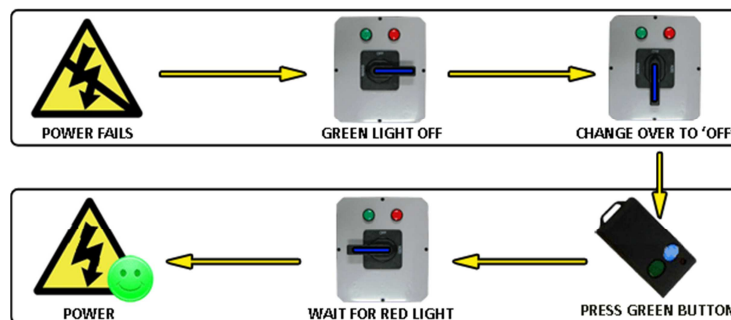

- More Control over when the generator starts and stops.
- You can never have mains and generator feeding the house at the same time.
- Avoid having to go outside to start the generator by fitting a Remote Start (Optional)

#### ABOUT

The Manual Change Over Switch (MCS) as the name suggests is a manual option to install your generator. You have the ability to start the unit and transfer the load from the incoming mains power to the generator power by switching the handle on the front of the MCS.

The generator takes about 30 seconds to sufficiently warm up at which stage you can turn the handle on the MCS and you will start supplying power to the circuits that have been put through the MCS.
